i-mop® XL & XXL Plus

Enhancements

Floating Ball System
The recovery tank now includes a new filter system. A floating ball is inserted in the filtration element which pops-up when the tank is full. This will close the tank and prevent water from overflowing. The i-mop will also stop extracting any residue from the floor to avoid water from entering the vacuum water via the tank.

Looking to upgrade your legacy tank? Simply swap out your existing recovery tank for the new recovery tank with ball float.

PLUS Charger
While the new PLUS charger closely resembles its replacement, it has the power to revive batteries that have drained below 18 volts to 6 volts*, providing more tolerance and flexibility. The new charger is designed to work with both legacy and PLUS models.

*subject to other factors including environment and age of batteries

Battery Safeguard
Raising the scrub deck into the park position (during the workday or when the i-mop is stored overnight) will automatically shut off the battery to prevent drainage and optimize battery life. Lowering the deck to working position will turn the battery back on.

Additionally, brushes will no longer rotate while in park position helping to reduce splashing.

Angle Switch
The new electronic angle switch automatically shuts down the motor if operated below a 32 degree angle helping to protect the motor from flooding.
